AlphaPixel Releases PixelSense 1.15

(Evergreen, CO) AlphaPixel, LLC has released version 1.15 of their debut product, PixelSense. PixelSense is a quick and easy tool for processing remote-sensed imagery such as Landsat TM and ETM bands into realistic natural-color georeferenced GeoTIFF images, ready-to-use in any mainstream GIS or visualization software. At only \$49 (USD), PixelSense opens the door to access the vast quantities of free Landsat data available online today.

PixelSense 1.15 adds several new features not found in PixelSense 1.0, including faster analysis, HSV and Brovey merging, and multi-file batch processing.

AlphaPixel leverages the strengths of the Internet to deliver streamlined and cost-effective sales, service and support. AlphaPixel products can be purchased 24 hours a day online at www.AlphaPixel.com.
